DETAILED ACTION

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-5, 45 and 64-67 are drawn to isolated polypeptide

Group II, claims 6-13 are drawn to an antibody and hybridoma cell line.

Group III, claims 14-29 and 68-74 are drawn to polynucleotide, a vector, a host and a method making the polypeptide.

Group IV, claims 30, 36 and 44 are drawn to a method of detecting RNA that encodes STRAP and kit.

Group V, claims 31-34 are drawn to a method of producing antibodies.

Group VI, claims 35 and 38-43 are drawn to a method of detecting a polypeptide employing an antibody and kit.

Group VII, claim 37 is drawn to a method of detecting DNA.

Group VIII, claims 46-48 are drawn to a method of screening for candidate substances.

Group IX, claims 49-56 are drawn to a method of modulating the polypeptide.

Group X, claims 57-61 are drawn to a method of treatment employing a substance capable of modulating the polypeptide.

Group XI, claims 62-63 are drawn to a method of treatment employing a biologically active STRAP.

Group XII, claims 75-77 are drawn to a transgenic animal.

The claims of these groups are directed to different inventions, which are not linked to form a single general concept. The claims in the different groups do not have in common the same or corresponding special technical features because the special technical feature of one group of invention is not present in the other. In particular, each group is directed to different compounds and/or methods. Accordingly, the claims are not so linked by a special technical feature within the meaning of PCT Rule 13.2 so as to form a single inventive concept and lack of unity is deemed proper.

2. The claims of Groups I and III are drawn to multiple nucleic acid and polypeptide sequences (SEQ ID NO: 1-3 and 5). Each of the different nucleic acid and polypeptide sequences are independent and distinct because no common structural or functional properties are shared. Accordingly, these sequences are each subject to restriction under 35 U.S.C. § 121. Regardless of the Group elected, Applicant is additionally required to elect a single nucleic acid or polypeptide sequence (depending on the Group elected), which if determined to be patentable, would also be patentably distinct from the other sequence. This requirement is made under 1192 O.G.68 Notice (November 19, 1996), as examination of more than one sequence in one application would result in an undue burden on the PTO.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1647

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
